

Calcined Petroleum Coke with Surfactant

“Terrier” Calcined Petroleum Backfill as per the following specification :-

Features

- ❑ Manufactured from premium calcined petroleum coke of the highest purity
- ❑ Increases size of anode

Typical compositional analysis :-

Fixed Carbon	98.5% min
Sulphur	1.2% max
Ash	0.5% max
Volatiles	0.5% max
Moisture	0.5% max
Size grading	1—3mm , (10% below 0.71mm,5% max above)
Resistivity	0.1 ohm cm @ 150 psi
Bulk density	800—900 kg per cubic metre

(please note that this depends upon the degree of compaction and is generally plus or minus 10%. All materials normally compact during transportation).

Packaging : 25 kg bags, shrink-wrapped on to pallets
