

Condulet and Pole Mount

Cathodic Protection Test Stations

Rugged Designs For Long-Life Operation

Cathodic protection systems require routine monitoring to ensure that adequate current is supplied to buried metallic structures. Test stations are a simple method for conducting this monitoring. Corrpro distributes a full line of pole- and condulet-style test stations with proven track records for durability and ease of use. The stations are available in numerous colors, shapes, and test lead configurations, and are made from either cast iron or high-impact-strength molded plastic. To address all kinds of applications, the stations can be constructed to accommodate from one to eleven test lead terminals. The terminals for all test stations offered are composed of corrosion-resistant nickel-plated brass to guarantee many years of accurate readings. Various types of mounting options are also available. The stations may be purchased with steel conduit or UV-protected polyethylene poses in various diameters and lengths, or may be ordered with special adapters for flange or vault-wall mounting.

The condulet and pole-mount test stations offered by Corrpro are designed to be extremely user friendly. Lids on the pole mount stations remove easily, and the terminals are clearly marked for quick identification. Condulet stations do not require protective caps, and the terminals are readily accessible for testing. Both types of test stations can be selected with either prong- or banana-jack terminals. Pole mount stations are also available with built-in shunts and locking lids.

Typical Applications

Pole- and condulet-style test stations are used to perform various corrosion-related electrical tests on buried metallic structures. These include structure-to-earth potentials, and the presence of stray currents. Pole-mount test stations, which can be selected in various color combinations, are typically used in areas where an identifiable marker is necessary. Condulet-style stations are most often installed in the vicinity of buildings or plant facilities.

Authorized Distributor for the Following Manufacturers
Cott Manufacturing Company Gerome Manufacturing Company

Corrpro Companies Europe Limited

Condulet and Pole Mount Cathodic Protection Test Stations

Ordering Procedure

Corrpro distributes an assortment of pole- and condulet-style test stations. To order the required station for your application, indicate the required station for your application, indicate the brand and model desired, and specify the quantity, terminal configuration, and mounting style needed. An example is provided to help illustrate this process.

Ordering Procedure Example	
ITEM	EXAMPLE
Quantity	200
Test Station Manufacturer	Cott
Test Station Model	Big Fink
Number of Terminals	5
Mounting Style	Plastic Pole
Colors: Pole Test Head	White Orange
Locking Device	Yes

Test Station Ordering Information

MODEL	STANDARD TERMINAL LEADS	MAXIMUM TERMINAL LEADS	MOUNTING STYLE	OTHER OPTIONS
COTT (Manufacturer)				
Big Fink	5	11	Six-Foot Polyethylene Poles	Flange Mounting Zip Guard Terminals Locking Lids
Little Fink	2	3	Five-Foot Polyethylene Poles	Flange Mounting Zip Guard Terminals Locking Lids
Finklet	1, 2, 3, 4	4	3/4" Conduit Polyethylene Poles	Banana Terminals
GEROME (Manufacturer)				
100 Series	5	7	3/4" - 2 1/2" Conduit	Thread or Slip Fit
700 Series	5	10	1" - 2 1/2" Conduit	Thread or Slip Fit
800 Series (Screw Cvr)	5	7	3/4" - 1 1/4" Conduit	Thread Fit
1000 Series (Dual Hub)	8	(Customer Specs)	1" - 1 1/4" Conduit	Thread or Slip Fit
2000 Series (Dual Hub)	8	(Customer Specs)	1 1/2" - 3 1/2" Conduit	Thread or Slip Fit
